

Gas Sampling Condenser

Dries and Cools Gas Samples

The ICT Gas Sampling Condenser is an important tool for delivering unaltered gas samples as well as providing protection for analyzers and other sampling equipment from moisture. As the sample is cooled, moisture from the gas entering the coil is removed without scrubbing out gas species of interest.

High Quality Design and Construction

The ICT Gas Sampling Condenser is manufactured of only the highest quality materials, featuring 304 stainless steel construction throughout. The moisture knockout features thick walled construction and a removable stainless steel plug to allow for draining and cleaning. High quality compression fittings allow for quick connect and disconnect of sample lines. All Condensers are tested and leak checked to ensure optimal performance from the first use.

Features at a Glance:

- 304 Stainless Steel Construction Throughout
- Cools and Dries the Gas Sample
- Avoids Scrubbing Out Gas Species
- Thick Walled Moisture Knockout Construction
- Plug for Easy Draining and Cleaning
